Enantiomeric Analysis of 4-Methyloctanoic Acid by Chiral Gas Chromatography

N. Heinsman, Wageningen Agricultural University, Wageningen, The Netherlands
Y. Belov, Gas Separations, Supelco, Bellefonte, PA, USA

Chiral capillary GC columns commercially available from Supelco and other suppliers were evaluated for the direct enantioseparation of 4-methyloctanoic acid and its methyl ester. The best results were achieved on a γ-DEX 120 column.

4-Methyloctanoic acid, its homologs, and its esters are flavor components of foods, and also are pheromones. Free 4-methyloctanoic acid and its homologs contribute to the odor of cheese and meat (mutton, lamb, goat) (1-3). Male coconut rhinoceros beetles (Oryctes rhinoceros L.) produce 4-methyloctanoic acid and its ethyl ester as sex-specific compounds (4). Enantiomers of 4-methylalkanoic acids have different odors (5). Consequently, enantiomeric analysis and separation of 4-methylalkanoic acids is important.

Enantioseparations of 2-branched fatty acids and esters with an asymmetric center near the carboxy group on commercially available columns are well recognized (6-7). However, little is known about the enantioseparation of branched alkanoic acids with the asymmetric center located farther from the carboxy group. Mosandl et al (8-9) separated enantiomers of 3- and 4-methylalkanoic acids and their methyl esters using heptakis(2,3-di-O-methyl-6-O-tert-butylidimethylsilyl)-β-cyclodextrin and octakis(2,3-di-O-methyl-6-O-tert-butylidimethylsilyl)-γ-cyclodextrin as chiral selectors.

We evaluated a number of commercially available columns for the direct enantioseparation of underivatized 4-methyloctanoic acid and its methyl ester. Supelco’s γ-DEX™ 120 column (30m x 0.25mm ID x 0.25µm film) offered the best resolution (Figures A and B).

The γ-DEX 120 capillary column is a member of Supelco’s DEX family of chiral columns. DEX columns are an excellent choice for many chiral applications, including foods, essential oils, natural products, pharmaceuticals, and products of chemical syntheses. They exhibit low bleed, and can be used in a wide temperature range.

DEX is a trademark of Sigma-Aldrich Co.

Fused silica columns manufactured under HP US Pat. No. 4,293,415.
