Information on subcontracting regarding the process of reference materials production

The accredited area Technical Service HYDRANAL allocate some steps in the reference materials production to selected subcontractors.

These steps are:

• Transfer of the RM-bulk quantities (liquid or solid) from the production area

• Interim storage of bulk quantities RM (liquid or solid)

• Quality-preserving filling of bulk quantities RM (liquid or solid) in small packages

• Assembly of the small pack in sales units

• Quality-preserving interim storage of finished Reference Materials

• Transfer of the materials to the logistics

• Picking and packing of the RM

• Quality-preserving shipping of RM in compliance with legal requirements
