G 418 disulfate salt

Product Codes G 5013, G 8168, A 1720, G 1279, and A 8601
Storage Temperature 2-8 °C

CAS # 108321-42-2

Product Description
Molecular weight: 692.7
Molecular formula: C_{20}H_{40}N_{4}O_{10} \cdot 2H_{2}SO_{4}
Specific Rotation: +104.4° (c = 0.3% in H_{2}O at 26 °C)

G 418 is an aminoglycoside antibiotic similar in structure to gentamycin. It exhibits toxicity towards both eukaryotic and prokaryotic cells. The optimal concentration for selection and maintenance must be determined for each cell line. For bacteria and algae, concentrations of 5 µg/ml or less are recommended. Animal cells may require up to 300-500 µg/ml. Typically, resistance is conferred by one of two dominant genes of bacterial origin, which can be expressed in eukaryotic cells. Cells that are multiplying will be affected sooner than those that are not. Cells in log phase may require three to seven days for selection. In general, concentrations of approximately 400 µg/ml for selection and 200 µg/ml for maintenance are required for mammalian cells.

Reagents
Products G 5013, A 1720, G 1279, and A 8601 are sold as powders. G 8168 is a 5% aqueous solution prepared from A 1720.

Products A 1720 and G 8168 are cell culture tested. Product G 1279 is tested for plant cell culture applications. A 8601 is Biotechnology Performance Certified grade.

Preparation Instructions
The G 418 powder is soluble in water at 50 mg/ml.

Storage/Stability
The G 418 powder is stable for three years as supplied when stored at 2-8 °C. The G 418 solution (Product Code G 8168) is stable for two years at 2-8 °C
