11.2 Additional Information

RTECS: VO5075000
Salicylic acid and other salicylates are transferred into breast milk. Animal and human data suggest that the reduced clearance of salicylates by neonates may result in drug accumulation and toxic effects even when repeated exposures are small. Because of these concerns, the WHO Working Group on Human Lactation classified the salicylates as unsafe for use by nursing women. To the best of our knowledge, the chemical, physical, and toxicological properties have not been thoroughly investigated.
