This set is intended to provide the chemist with a full range of airtight closures for most laboratory glassware including \( \frac{7}{8} \) joints, storage bottles, test tubes, and round-bottom and Erlenmeyer flasks. Each septum is identified by the number appearing on the upper surface when the sleeve is pulled down over the lip of the stoppered container.

Each size, along with the Aldrich catalog number, Suba•Seal number and container neck internal diameter, is represented in its location within the carrying case to facilitate reordering.
