Dispensette® – the right bottle-top dispenser for your application.

Dispensette®

The original Dispensette® with its broad range of application has proven reliable for accurate dispensing even of aggressive reagents.

- **Dispensette® III**: for many acids, bases, saline solutions as well as many organic solvents.
- **Dispensette® Organic**: optimized for dispensing organic solvents and acids.
- **Dispensette® TA**: for dispensing acids, bases and hydrogen peroxide and with platinum-iridium valve spring suitable for HF.
Choose your dispenser

The Dispensette® with its broad range of application has proven reliable for accurate dispensing even of aggressive reagents.

Dispensing with a gentle touch

We bring 40 years of experience and the most modern manufacturing technology to the development and production of bottle-top dispensers. Pistons and cylinders are accurately machined and hand matched to provide a low-wear seal, optimum sliding properties and virtually effortless, one-handed dispensing.

Product features

- The 45 mm standard thread plus the included adapters fit common lab bottles.
- The valve block can be rotated 360° so that the bottle label always faces the user for safety.
- Telescoping filling tube adjusts to different bottle sizes
- Easy to dismantle for cleaning
- Replaceable filling valves for simple, economical service
- Autoclavable at 121 °C (except for Dispensette® TA)
- Conformity certified
- Easy to calibrate and adjust in order to comply with ISO 9001 and GLP guidelines. A positive indicator automatically indicates adjustment from factory settings.

An extensive line of accessories makes possible special dispensing tasks like sterile applications or dispensing from large containers.

Handling

Serial dispensing

The flexible discharge tube with safety handle facilitates serial dispensing. It permits fast and precise dispensing even into narrow test tubes.

Dispensing sterile fluids

The Dispensette® is completely autoclavable at 121 °C (except for Dispensette® TA). Optional microfilters protect the bottle contents from contamination.

Dispensing sensitive reagents

The drying tube protects sensitive reagents against humidity or CO₂.

Volume adjustment

- Digital · Easy Calibration
  - Digital display: especially easy to read, and dispensing volume can be set accurately and reproducibly (mechanical counter).
  - Easy Calibration: Innovative technique for adjustment in seconds without tools.

- Analog-adjustable
  - Fast volume adjustment with analog slide
  - Simple calibration adjustment with supplied tool.

- Fixed-volume
  - Fixed-volume for standard applications
  - Simple calibration adjustment with supplied tool.
Dispensette® III

Dispensette® III (color-code red): Its broad range of application permits bottle dispensing of aggressive reagents, including concentrated acids such as H₃PO₄, H₂SO₄, bases like NaOH, KOH, saline solutions, as well as many organic solvents. For such reagents as concentrated HCl and HNO₃, for trifluoroacetic acid (TFA), tetrahydrofuran (THF), dichloromethane and peroxides, we recommend the Dispensette® Organic.

Special fixed volumes: 0.5-100 ml (please state when ordering)

Dispensette® III: borosilicate glass, Al₂O₃-ceramic, platinum-iridium, ETFE, FEP, PFA and PP (discharge tube safety screw cap)

Dispensette® Organic: borosilicate glass, Al₂O₃-ceramic, tantalum, ETFE, FEP, PFA and PP (discharge tube safety screw cap)

Dispensette® TA: ETFE, FEP, PFA and PTFE. The purest sapphire is used for the valves. Depending on the design, platinum-iridium or tantalum are available as spring materials.

Additional information on the Dispensette® (operating manual, SOP, etc.) can be found at www.brand.de
Dispensette® Organic (yellow color-code) is ideal for dispensing of organic solvents including chlorinated and fluorinated hydrocarbons (e.g., trichlorotrifluoroethane and dichloromethane), concentrated acids (e.g., HCl and HNO₃), trifluoroacetic acid (TFA), tetrahydofuran (THF) and peroxides. For bases and saline solutions we recommend the Dispensette® III.

### Dispensette® TA

Dispensette® TA is a special instrument for dispensing high-purity acids, alkalis, and hydrogen peroxide for trace analysis. This instrument is also suitable for dispensing hydrofluoric acid (HF) with Pt/Ir valva spring. Further information can be found at www.brand.de, or you can request our detailed brochure.

* All dispensers calibrated to deliver (TD, Ex). Error limits according to the nominal capacity (+ maximum volume) indicated on the instrument, obtained with instrument and distilled water at equilibrium with ambient temperature at 20 °C, and with smooth, steady operation. The error limits are well within the limits of DIN EN ISO 8655-5. Conformity certified to DIN 12 600.

A = Accuracy, CV = Coefficient of variation

** Not autoclavable. Not suitable for organic solvents.

**Dispensette® TA bottle-top dispenser with platinum-iridium valve spring** (Cat. No. 4740 041).

- Use ETFE/PTFE bottle adapter
- Use PTFE seal for valve block

The above recommendations reflect testing completed prior to publication. Always follow instructions in the operating manual of the instrument as well as the reagent manufacturer’s specifications. In addition to these chemicals, a variety of organic and inorganic saline solutions (e.g., biological buffers), biological detergents and media for cell culture can be dispensed. Should you require information on chemicals not listed, please feel free to contact BRAND. Status as of 0314/12
