Our expertise in sterility testing dates back over 40 years from when we invented the original Steritest™ closed filtration system, which changed sterility testing forever. We continue to raise the industry standards and drive innovation to provide you the most secure and reliable test.

Select Your Steritest™ NEO Device

- **Steritest™ NEO Double Packed Devices**
  - Canister sealed and double packed for quick and easy transfer processes, ensuring contamination-free handling.
  - Suitable for processing different liquids, regardless of viscosity or concentration.
  - Canister seal and reseal feature prevents leaks and contamination.

- **Steritest™ NEO Accessories for Dilution and Transfer**
  - Single needle for easy access to the product.
  - Single needle canister for aseptic manipulation.
  - Canister seal for secure and reliable transfer.

- **Liquid Transfer**
  - Single needle connection for efficient transfer of liquids from ampoules or vials.
  - Ideal for transferring small volumes of liquids.
  - Canister seal for secure and reliable transfer.

- **Steritest™ NEO Devices for Liquid Transfer**
  - Single needle canister for aseptic manipulation.
  - Canister seal for secure and reliable transfer.

Pumps and Accessories

- **Steriflo™ Syringe Pumps**
  - High-pressure pumps designed for optimal performance.
  - Easy to use, ensuring precise and controlled injection.
  - Ideal for handling a variety of liquids.

Culture Media and Diluting/Rinsing Fluids

- **Culture Media**
  - Formulated to meet the requirements of USP, Japanese and European Pharmacopoeias.

- **Diluting/Rinsing Fluids**
  - Formulated to meet the requirements of USP, Japanese and European Pharmacopoeias.

Services and Support

- **Application Support**
  - Technical assistance and advice on all aspects of sterility testing.

- **Validation Support**
  - Comprehensive validation services to ensure compliance with cGMP guidelines.
  - Includes installation (IQ), operational (OQ), and performance qualification (PQ) protocols.

- **On-site Validation Services**
  - Expertise in compliance with pharmaceutical standards and international pharmacopoeias.
  - Ready-to-use protocols including installation (IQ), operational (OQ), and performance qualification (PQ) protocols.

- **Requalification**
  - Ensure your pump stays qualified.

- **IQ, OQ**
  - Execution of the test methods for installation (IQ) and operational (OQ) validation.

- **PQ**
  - Performance qualification to ensure optimal equipment functionality.

- **In-Depth Practical Training**
  - Comprehensive training on sterility testing covering:
    - Advanced Operator Training (AOT)
    - Method Lifecycle
    - Result Interpretation

- **Annual Preventive Maintenance**
  - Yearly preventive maintenance to provide reliable testing according to cGMP guidelines.

- **Sterility Testing Evaluation**
  - On-site verification of the sterility testing equipment performance, such as reproducibility of filtrate volume and splitting capability.

- **SVS/SBA**
  - Single use verification system designed for single-use applications.

- **Certification**
  - Certificate of attendance and examination form for training and support.

- **Transport and Storage**
  - Ready-to-use protocols including installation (IQ), operational (OQ), and performance qualification (PQ) protocols.

- **Additional Services**
  - Support for all aspects of sterility testing.

- **Contact Us**
  - For more information or to request a quote.
