TRIPTOLIDE

Product Number T3652
Storage Temperature 2-8 °C

CAS #: 38748-32-2
Synonyms: PG490

Triptolide is a diterpene triepoxide purified from the Chinese herb *Tripterygium wilfordii* hook (TwHF) and is the principal active ingredient in the herb extract. It is a potent immunosuppressant and anti-inflammatory. Triptolide has been shown to inhibit the expression of IL-2 in activated T cells at the level of purine-box/nuclear factor and NF-κB mediated transcription activation. It synergizes with cyclosporin A in promoting graft survival in animal models and in suppression of graft versus host disease in allogeneic bone marrow transplants. In addition, it induces apoptosis in tumor cells and potentiates tumor necrosis factor (TNF-α) induction of apoptosis in part through the suppression of c-IAP2 and c-IAP1 induction.

Storage/Stability
Store at 2-8 °C. Protect from light and store in tightly closed container.

Preparation Instructions
Soluble in DMSO. After reconstitution, store stock solution at −20 °C.
