ANTI-BOVINE SERUM ALBUMIN (BSA)
Developed in Rabbit Delipidized, Whole Antiserum

Product No. B 1520

Product Description
Anti-Bovine Serum Albumin (BSA) was developed in rabbit using purified BSA from Cohn Fraction V as the immunogen. The antiserum has been treated to remove lipoproteins.

Strong reactivity with BSA has been determined by immunoelectrophoresis (IEP).

Reagents
Rabbit Anti-BSA is provided as a liquid containing 15 mM sodium azide as preservative.

Precautions
Due to the sodium azide content a material safety data sheet (MSDS) for this product has been sent to the attention of the safety officer of your institution. Consult the MSDS for information regarding hazards and safe handling practices.

Product Profile
Protein Concentration: Determined by Biuret.

Each milliliter of antiserum contains at least 2.0 mg of specific antibody. Normal bovine serum is used to determine the antibody concentration by a quantitative precipitation assay.

Storage
For continuous use, store at 2-8 °C for up to one month. For extended storage, the solution may be frozen in working aliquots. Repeated freezing and thawing is not recommended. Storage in “frost-free” freezers is not recommended. If slight turbidity occurs upon prolonged storage, clarify the solution by centrifugation before use.
