Enzymatic Assay of OROTIDINE-5'-PHOSPHATE PYROPHOSPHORYLASE and OROTIDINE-5'-PHOSPHATE DECARBOXYLASE

PRINCIPLE:

Orotate + PRPP → OMP + PP\textsubscript{i}

OMP → Uridine 5'-Monophosphate + CO\textsubscript{2}

Abbreviations used:
PRPP = 5-Phosphorylribose-1-Pyrophosphate
OMPP = Orotidine-5'-Monophosphate Pyrophosphorylase
OMP = Orotidine 5'-Monophosphate
PP\textsubscript{i} = Inorganic Pyrophosphate
OMP Decarboxylase = Orotidine 5'-Monophosphate Decarboxylase

CONDITIONS:  T = 25°C, pH = 8.0, A\textsubscript{295nm}, Light path = 1 cm

METHOD:  Continuous Spectrophotometric Rate Determination

REAGENTS:

A. 25 mM Tris HCl Buffer with 8 mM Magnesium Chloride, pH 8.0 at 25°C
   (Prepare 100 ml in deionized water using Trizma Hydrochloride, Sigma Prod. No. T-3253, and Magnesium Chloride, Hexahydrate, Sigma Prod. No. M-0250. Adjust to pH 8.0 at 25°C with 1 M NaOH.)

B. 14 mM Orotic Acid Solution (Orotic Acid)
   (Prepare 2 ml in deionized water using Orotic Acid, Monosodium Salt, Sigma Prod. No. O-3000. Heating may be required for solubilization.)

C. 16 mM 5-Phosphorylribose-1-Pyrophosphate Solution (PRPP)
   (Prepare 2 ml in deionized water using 5-Phosphorylribose-1-Pyrophosphate, Sodium Salt, Sigma Prod. No. P-8296.)
**Enzymatic Assay of OROTIDINE-5'-PHOSPHATE PYROPHOSPHORYLASE and OROTIDINE-5'-PHOSPHATE DECARBOXYLASE**

**REAGENTS:** (continued)

D. Orotidine-5'-Phosphate Pyrophosphorylase and Orotidine-5'-Phosphate Decarboxylase Enzyme Solution
(Immediately before use, prepare a solution containing approximately 26 units/ml of Orotidine-5'-Phosphate Pyrophosphorylase and Orotidine-5'-Phosphate Decarboxylase Mixed Enzymes in cold Reagent A.)

**PROCEDURE:**

Pipette (in milliliters) the following reagents into suitable cuvettes:

<table>
<thead>
<tr>
<th></th>
<th>Test</th>
<th>Blank</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reagent A (Buffer)</td>
<td>2.75</td>
<td>2.75</td>
</tr>
<tr>
<td>Reagent B (Orotic Acid)</td>
<td>0.05</td>
<td>0.05</td>
</tr>
<tr>
<td>Reagent D (Enzyme Solution)</td>
<td>0.10</td>
<td>0.10</td>
</tr>
</tbody>
</table>

Mix by inversion and equilibrate to 25°C. Monitor the \(A_{295\text{nm}}\) until constant using a suitably thermostatted spectrophotometer. Then add:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Reagent C (PRPP)</td>
<td>0.10</td>
</tr>
<tr>
<td>Deionized Water</td>
<td>------</td>
</tr>
</tbody>
</table>

Immediately mix by inversion and record the decrease in \(A_{295\text{nm}}\) for approximately 10 minutes. Obtain the \(A_{295\text{nm}}/\text{minute}\) using the maximum linear rate for both the Test and Blank.

**CALCULATIONS:**

\[
\text{Units/ml enzyme} = \frac{(A_{295\text{nm}}/\text{min Test} - A_{295\text{nm}}/\text{min Blank})(3)(60)(df)}{(3.95)(0.1)}
\]

3 = Total volume (in milliliters) of assay
60 = Conversion factor from minutes to hours as per the Unit Definition
df = Dilution factor
3.95 = Millimolar extinction coefficient\(^1\) of orotic acid at 295 nm
0.1 = Volume (in milliliter) of enzyme used
Units/mg solid = \frac{\text{units/ml enzyme}}{\text{mg solid/ml enzyme}}
Enzymatic Assay of OROTIDINE-5'-PHOSPHATE PYROPHOSPHORYLASE and OROTIDINE-5'-PHOSPHATE DECARBOXYLASE

CALCULATIONS: (continued)

\[
\text{Units/mg protein} = \frac{\text{units/ml enzyme}}{\text{mg protein/ml enzyme}}
\]

UNIT DEFINITION:

One unit will catalyze the phosphorylation of 1.0 µmole of orotic acid to 5'-OMP, which is then decarboxylated to 5'-UMP in one hour at pH 8.0 at 25°C, in a PRPP system.

FINAL CONCENTRATION:

In a 3.00 ml reaction mix, the final concentrations are 24 mM Tris, 8 mM magnesium chloride, 0.2 mM orotic acid, 0.5 mM 5'-phosphorylribose-1-pyrophosphate, 2.6 units orotidine-5'-phosphate pyrophosphorylase, and orotidine 5'-phosphate decarboxylase mixed enzymes.

REFERENCE:

NOTES:

1. The millimolar extinction coefficient of orotic acid is described in Möllering, H. (1974).
2. This assay is based on the cited reference.
3. Where Sigma Product or Stock numbers are specified, equivalent reagents may be substituted.
