Pimaricin

Product Number  P 0440
Storage Temperature  2-8 °C

Product Description
Molecular Formula:  C₃₃H₄₇NO₁₃
Molecular Weight:  665.7
CAS Number:  7681-93-8

This product is a γ-irradiated saline suspension with approximately 2.5% pimaricin.

Pimaricin is a polyene antifungal antibiotic produced by Streptomyces natalensis from soil near Pietermaritzburg, South Africa. Pimaricin has antimicrobial activity similar to that of nystatin. In addition, it is active against Trichomonas vaginalis. Pimaricin is used in the treatment of candidiasis, trichomoniasis, fungal keratitis, and aspergillosis. It has also been used as a food additive in some countries. In some studies, it has been shown to decrease the amount of mold upon which the Dermatophagoides pteronyssinus (house-dust mite) is dependent.

Precautions and Disclaimer
For Laboratory Use Only. Not for drug, household or other uses.

Preparation Instructions
The product can be further diluted with 0.5 M sodium chloride giving a suspension as well. The product can be further diluted into an organic solvent such as dimethylformamide (may also be soluble in DMSO).

The product and any aqueous dilutions will be suspensions and should not be sterile filtered.

Storage/Stability
The product is not degraded by a single freeze-thaw cycle. The diluted product should be aliquoted and stored frozen.
