Precision, Small-Unit Packaging for Pharmaceuticals
Ampuls...Vials...Pouches
Do it Faster, Better, and for Less

Every aspect of drug development faces the same demands: do it faster; make it better; and do it for less. In fact, these words have become the mantra for pharmaceutical researchers involved with everything from discovery to production to reference material management. Conflicting demands on you, your staff, and your resources make it difficult to get the results you need. Certainly, the details of repackaging projects can distract your group from their primary tasks, creating a gap in the process. Whether you’re handling raw materials, intermediates, or active ingredients, repackaging requires careful attention to details including: labeling, documentation, cleaning, and distribution. Most important, repackaging and reference material management are critical links in the drug development supply chain — and now, you can make that chain even stronger, by linking with Supelco’s specialty packaging services.

Focus on Value

Combined with your expertise, Supelco can be a valued supply-chain partner. We focus on giving you comprehensive, easy-to-use repackaging solutions — so you can focus on other demands. We understand the pharmaceutical industry and have developed specialized packaging services to help you:

- Increase capacity without increasing headcount
- Reduce cycle times without increasing costs
- Reduce costs associated with specialized packaging and distribution
- Ensure product traceability and quality
- Meet your end-users’ packaging and labeling needs

For 100 or 100,000 units, Supelco lets you do it faster, make it better, and do it for less by letting you focus where you need to focus.

Formulation and Packaging Capabilities

**cGMP**
- 21 CFR - Parts 210-211 requirements

**Ampul Packaging**

**Liquids**
- Nitrogen or argon blanket in amber glass
- 0.2mL to 50mL
- Reduced light conditions
- Varying viscosity and hazards

**Solids**
- Powders or crystalline materials
- Argon blanket in amber glass
- Single use ampuls
- No burning material in ampul neck
- Blending and sieving as necessary
- 10mg to 1000mg

**Vials**
- Solids and liquids
- Crimp and screw caps
- Wide range of septa materials

**Metalized Pouches**
- Inert argon atmosphere
- Heat-sealed
- 100mg to 1000mg
- Compact single use alternative

**Documentation**
- Batch production sheets
- Cleaning records
- Material inventory records
- Analytical data
- Environmental conditions

**Labeling**
- Customized labeling
- Sequential labeling of packaged units
Using ampulization, we successfully repackaged Retinoic Acid, Ergocalciferol, and similar materials and dramatically extended the shelf life of these compounds during another successful pharmaceutical partnership.

When various pharmaceuticals outsourced their standards production to us, they were able to focus on their core business competency, improve inventory logistics, and achieve significant cost control.

We repackaged and distributed biocides under ISO and GMP requirements and managed the required customer screening by FDA and EPA. Our lot control system helped our customers manage their material inventories.

For all of your specialty packaging needs, link with our team of professionals to do it faster, make it better, and do it for less...
We start by gathering information about your organization and your packaging requirements. A detailed questionnaire and a site visit by one of our packaging professionals provides us with the information we need about your organization and project specifications. We'll discuss the issues that matter the most to you, such as problems you are having, the results you expect, and your project requirements.

Just as important, you'll learn about our packaging options, distribution capabilities, testing services, and documentation and labeling standards. You can trust in our 30 years of experience and in our dedicated packaging professionals to develop a project plan that meets all of your expectations and requirements.

We'll develop a packaging-needs assessment plan for you and provide you with a written, detailed quote based upon your specific needs and requests.

Call us for a free packaging-needs assessment.
Let us develop the customized solution you need.
