Supelco is providing its unique air sampling adsorbents in a comprehensive selection of adsorbent tubes for GERSTEL’s model TDS2/TDSA instrument. These tubes offer superior performance for trapping and thermally desorbing organic compounds.

Supelco provides tubes manufactured to close tolerances to ensure consistent performance from lot to lot. The adsorbents retain desired compounds effectively, then release them quickly, and completely during thermal desorption. We offer tubes packed with a single bed of adsorbent, or with multiple beds of various adsorbents, designed to collect molecules of a broad range of sizes. Many of the adsorbents we use are available nowhere else. In addition to the tubes listed here, we provide custom thermal desorption tubes.

### Thermal Desorption Tubes for GERSTEL TDS2/TDSA

All tubes are 17.8cm length x 6mm OD x 4mm ID. All tubes are pre-conditioned and then sealed in our TDS³ storage container.

*Glass tubes are packed by bed length; stainless steel tubes are packed by bed weight

### TDS³ Storage and Sampling Container for Thermal Desorption Tubes

Our TDS³ storage container holds the thermal desorption tube in a hard polymer shell – there is virtually no chance the tube will break during shipping and handling. The storage endcaps can be removed and replaced with sampling endcaps, allowing you to easily attach the container to a personal sampling pump, through the hose barb connection on the outlet endcap. The inlet cap clips to your label.
