Preppy Vacuum Manifold for SPE
Product Specification

The Preppy™ vacuum manifold (Figure A) enables the user of solid phase extraction (SPE) tubes to prepare up to 12 samples simultaneously. It is Supelco’s simplest and most economical manifold.

The Preppy manifold consists of a chemical-resistant cover and gasket, a glass basin, a vacuum release vent, 12 individual flow control valves with knurled tops and stainless steel solvent guide needles.

Accessories

- Collection Vessel Racks - two versions:
  - Cat. No. 57162-U (Figure B) holds 15 mL (with 21 mm O.D.) and 20 mL (with 28 mm O.D.) vials.
  - Cat. No. 57159-U (Figure C) is reversible, holding 1 mL autosampler vials on one side and 4 mL vials on the other side. Adapters for the 1-4 mL vessel rack hold mini-centrifuge tubes.

- Vacuum Gauge/Bleed Valve Assembly (Figure D) - can be installed in place of the standard vacuum release vent to allow the vacuum in the Preppy manifold to be precisely controlled.

- Visidry™ Drying Attachment (Figure E) - dries 12 tubes at one time; can be used with any inert gas.

- SPE Vacuum Pump Trap Kit (Figure F) - collects liquids that are aspirated through the SPE tubes.

- Visiprep™ Large Volume Sampler (Figure G) - extracts multiple liquid samples directly from lab containers.

Figure A. Preppy Manifold

Figure B. Rack for 15 mL and 40 mL Vials

Recommended Vial Spec.:
15 mL vial = 21 mm O.D.
40 mL vial = 28 mm O.D.

Figure C. Reversible Rack for 1 mL and 4 mL Vials

Holds 4 mL Vials
Holds 1 mL Vials

Figure D. Vacuum Gauge/Bleed Valve Assembly

Figure E. Visidry Drying Attachment

Figure F. SPE Vacuum Pump Trap Kit

Figure G. Visiprep Large Volume Sampler
This drying attachment installs in minutes, dries 12 tubes at one time, and can be used with any inert gas. The drying attachment is also useful for concentrating recovered samples. Gas flow to each tube can be adjusted independently.

When installed between a Preppy vacuum manifold and the vacuum source, the trap collects all liquids that are aspirated through the SPE tubes. This prevents liquids exiting the manifold from contaminating the vacuum pump. The easily assembled kit contains a polypropylene filtering flask, a one-hole rubber stopper, 4" (10 cm) of polypropylene tubing and 5' (1.5m) of red rubber vacuum hose.

Used with conventional SPE tubes and a Preppy SPE vacuum manifold, the Visiprep Large Volume Sampler extracts multiple liquid samples directly from laboratory containers. Each unit consists of tube adapters (which fit standard polypropylene tubes), replaceable screw fittings, and 1/8" Teflon tubing. A stainless steel weight at the end of each piece of tubing keeps the tubing in the sample. The screw fittings and the Teflon tubing are color-coded for easy sample identification.
