Phospho-EGFR (pTyr\textsuperscript{1086}) and pan-EGFR ELISA Kit
for detection of human phospho-EGFR (pTyr\textsuperscript{1086}) and pan-EGFR in cell and tissue lysates

Catalog Number RAB0168
Storage Temperature –20 °C

TECHNICAL BULLETIN

Product Description
The Phospho-EGFR (pTyr\textsuperscript{1086}) and pan-EGFR ELISA kit is an in vitro enzyme-linked immunosorbent assay for the measurement of human phospho-EGFR (pTyr\textsuperscript{1086}) and pan-EGFR, which helps normalize the results of phospho-EGFR from different cell lysates being compared. An anti-EGFR antibody has been coated onto a 96 well plate. Samples are pipetted into the wells, and phosphorylated and unphosphorylated EGFR present in a sample are bound to the wells by the immobilized antibody. The wells are washed and anti-phosphorylated EGFR (pTyr\textsuperscript{1086}) or anti-pan-EGFR antibody is used to detect phosphorylated or non-phosphorylated EGFR. After washing away unbound antibody, HRP-conjugated anti-Rabbit IgG or HRP-Streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of EGFR (pTyr\textsuperscript{1086}) or pan-EGFR bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.

Components
1. Capture Antibody-Coated Microplate (Item A) - RABEY1086A: 96 wells (12 strips × 8 wells) coated with monoclonal anti-EGFR.
2. 20x Wash Buffer Concentrate (Item B) - RABWASH5: 25 mL of 20x concentrated solution
3. Anti-Phospho-EGFR (pTyr\textsuperscript{1086})-specific Antibody Concentrate (Item C1) - RABE1086C1: 1 vial rabbit anti-EGFR (pTyr\textsuperscript{1086}).
4. HRP-conjugated Anti-Rabbit IgG Concentrate (Item D1) - RABHRP4: 25 µL of 500x concentrated HRP-conjugated anti-rabbit IgG.
5. Pan EGFR Antibody (Item L) - RABEGFRL: 1 vial goat anti-EGFR.
6. HRP-Streptavidin (Item G) - RABHRP6: 200 µL of 600 fold concentrated HRP-Streptavidin concentrate.
7. 5x Assay Diluent (Item E) - RABDIL11: 15 mL of 5x concentrated buffer. For diluting cell lysate, antibody (Item L), HRP-conjugated anti-rabbit IgG (Item D-1) and HRP-Streptavidin (Item G) diluent.
8. TMB One-Step Substrate Reagent (Item H) - RABTMB4: 12 mL of 3, 3′, 5, 5′-tetramethylbenzidine (TMB) in buffered solution.
9. Phosphorylation ELISA Stop Solution (Item I) – RABSTOP3: 8 mL of 0.2 M sulfuric acid.
10. 2x Cell Lysate Buffer (Item J) - RABCLB1: 5 mL of 2x Cell Lysate Buffer (not including protease and phosphatase inhibitors).
11. Phospho-EGFR (pTyr\textsuperscript{1086}) Lyophilized Positive Control Sample (Item K) - RABPEYK: 1 vial of lyophilized powder from A431 cell lysate.

Reagents and Equipment Required but Not Provided.
1. Microplate reader capable of measuring absorbance at 450 nm.
2. Protease and Phosphatase inhibitors.
4. Precision pipettes to deliver 2 µL to 1 mL volumes.
5. Adjustable 1-25 mL pipettes for reagent preparation.
6. 100 mL and 1 liter graduated cylinders.
7. Distilled or deionized water.
8. Tubes to prepare sample dilutions.

Precautions and Disclaimer
For R&D use only. Not for drug, household, or other uses. Please consult the Safety Data Sheet for information regarding hazards and safe handling practices.

Preparation Instructions
Sample Preparation
2x Cell Lysate Buffer should be diluted 2-fold with deionized or distilled water to yield 1x Cell Lysate Buffer (addition of protease and phosphatase inhibitors to 1x Cell Lysate Buffer is recommended prior to sample preparation).
Cell lysates - Rinse cells with PBS, making sure to remove any remaining PBS before adding the Cell Lysate Buffer. Solubilize cells at $4 \times 10^7$ cells/mL in 1x Cell Lysate Buffer. Pipette up and down to resuspend and incubate the lysates with shaking at 2–8 °C for 30 minutes. Microcentrifuge at 13,000 rpm for 10 minutes at 2–8 °C, and transfer the supernatants into a clean test tube. Lysates should be used immediately, or aliquoted and stored at –70 °C. Avoid repeated freeze-thaw cycles. Thawed lysates should be kept on ice prior to use.

For the initial experiment, it is recommend to perform serial dilution testing such as 5-fold and 50-fold dilution for the cell lysates with 1x Assay Diluent (Item E) before use.

Note: The fold dilution of sample used depends on the abundance of phosphorylated proteins and should be determined empirically. More of the sample can be used if signals are too weak. If signals are too strong, the sample can be diluted further.

Reagent Preparation
1. Bring all reagents and samples to room temperature (18–25 °C) before use.
2. Item E, Assay Diluent should be diluted 5-fold with deionized or distilled water before use.
3. Preparation of Positive Control: Briefly spin the Positive Control vial of Item K. Add 800 µL of 1x Assay Diluent (Item E, Assay Diluent should be diluted 5-fold with deionized or distilled water before use) into Item K vial to prepare a Positive Control (P-1) Solution. Dissolve the powder thoroughly by a gentle mix (it can be removed by centrifuge if any precipitate in the solution is found). Pipette 300 µL of 1x Assay Diluent into each tube. Use the Positive Control (P-1) to produce a dilution series (see Figure 1). Mix each tube thoroughly before the next transfer. 1x Assay Diluent serves as the background.

Figure 1.
Dilution Series for Positive Control

![Dilution Series for Positive Control](image)

4. If the Wash Concentrate (20x) (Item B) contains visible crystals, warm to room temperature and mix gently until dissolved. Dilute 20 mL of Wash Buffer Concentrate into deionized or distilled water to yield 400 mL of 1x Wash Buffer.

5. Briefly spin the anti-phospho-EGFR (pTyr1086) (Item C) before use. Add 100 µL of 1x Assay Diluent into the vial to prepare a detection antibody concentrate. Pipette up and down to mix gently (the concentrate can be stored at 4 °C for 5 days. It can be used for one month if stored at –80 °C. Avoid repeated freeze-thaw cycles). The detection antibody concentrate should further be diluted 60-fold with 1x Assay Diluent and used in Procedure, step 4.
6. Briefly spin the HRP-conjugated anti-rabbit IgG (Item D-1), before use. Pipette up and down to mix gently. HRP-conjugated anti-rabbit IgG concentrate should be diluted 500-fold with 1x Assay Diluent.

7. Briefly spin the Detection Antibody vial (Item L) before use. Add 100 µL of 1x Assay Diluent into the vial to prepare a detection antibody concentrate. Pipette up and down to mix gently (the concentrate can be stored at 4 °C for 5 days. It can be used for one month if stored at –80 °C. Avoid repeated freeze-thaw cycles). The detection antibody concentrate should be diluted 200-fold with 1x Assay Diluent and used in Procedure, step 4.

8. Briefly spin the HRP-Streptavidin concentrate vial (Item G), and pipette up and down to mix gently before use since precipitation may form during storage. HRP-Streptavidin concentrate should be diluted 600-fold with 1x Assay Diluent. For example: Briefly spin the vial (Item G) and pipette up and down to mix gently. Add 20 mL of HRP-Streptavidin concentrate into a tube with 12 mL of 1x Assay Diluent B to prepare a 600-fold diluted HRP-Streptavidin solution (don’t store the diluted solution for next day use). Mix well.

Procedure
1. Bring all reagents to room temperature (18–25 °C) before use. It is recommended that all samples or Positive Control should be run at least in duplicate.

2. Add 100 µL of each sample or positive control into appropriate wells. Cover well with plate holder and incubate for 2.5 hours at room temperature or overnight at 4 °C with shaking.

3. Discard the solution and wash 4 times with 1x Wash Solution. Wash by filling each well with Wash Buffer (300 µL) using a multichannel pipette or autowasher. Complete removal of liquid at each step is essential to good performance. After the last wash, remove any remaining Wash Buffer by aspirating or decanting. Invert the plate and blot it against clean paper towels.

4. Add 100 µL of prepared 1x Anti-phospho-EGFR (pTyr1086) (Preparation, step 5) or 1x pan-EGFR Antibody (Preparation, step 7) to each well. Incubate for 1.5 hour at room temperature with shaking.

5. Discard the solution. Repeat the wash as in step 3.

6. Add 100 µL of 1x HRP-conjugated anti-rabbit IgG (see Preparation step 6) to detect rabbit anti-phospho-EGFR (pTyr1086) (well to which rabbit phospho-EGFR antibody was added) or 100 µL of 600 diluted HRP-Streptavidin to detect pan-EGFR (corresponding well to which pan-EGFR antibody was added). Incubate for 1 hour at room temperature with shaking.

7. Discard the solution. Repeat the wash as in step 3.

8. Add 100 µL of TMB One-Step Substrate Reagent (Item H) to each well. Incubate for 30 minutes at room temperature in the dark with shaking.

9. Add 50 µL of Stop Solution (Item I) to each well. Read at 450 nm immediately.

Storage/Stability
Store the kit at –20 °C Please use within 1 year from the date of shipment. Avoid repeated freeze-thaw cycles.

After initial use, Wash Buffer Concentrate (Item B), Assay Diluent (Item E), HRP-Streptavidin (Item G), TMB One-Step Substrate Reagent (Item H), Stop Solution (Item I), Cell Lysate Buffer (Item J), and Pan Antibody (Item L) should be stored at 2–8 °C to avoid repeated freeze-thaw cycles.

Return unused wells to the pouch containing desiccant pack, reseal along entire edge, and store at –20 °C.

Reconstituted Positive Control (Item K) should be stored at –70 °C.
**Results**

**Typical Data**
ELISA data analysis: Average the duplicate readings for each sample or positive control then subtract the average blank optical density.

**Positive Control**
A431 cells were treated with recombinant human EGF at 37 °C for 20 minutes. Solubilize cells at 4 × 10⁷ cells/mL in Cell Lysate Buffer. Serial dilutions of cell lysates were analyzed in this ELISA. Please see Preparation, step 3 for detail.

**EGF Stimulation of A431 Cell Lines:** A431 cells were treated or untreated with 100 ng/mL recombinant human EGF for 10 minutes. Cell lysates were analyzed using this phosphoELISA and Western blot.

**ELISA**

![ELISA graph](image)

**Western blot**

![Western blot](image)
Sensitivity
The A431 cells were treated with 100 ng/mL recombinant human EGF for 20 minutes to induce phosphorylation of EGFR. Serial dilutions of lysates were analyzed in this ELISA and by Western blot. Immunoblots were incubated with anti-phospho-EGFR (pTyr<sup>1086</sup>).
